Multiphase Transfer Pump (MPTP)

After nearly 2 months operating in field, we are seeing exceptional results from the MPTP. The MPTP is operating as expected with over 1000 runtime hours meeting performance targets:

Emulsion: 1045 bbl/d (166 m³/d)

Gas: 180 mcf/d (5.2 e³m³/d)

Suction Pressure: 50 psi (345 kPa)

Discharge Pressure: 250 psi (1725 kPa)

Visit our [website](#) for complete specifications on the MPTP

Liquid rates up to 16,370 bpd (2660 m³/d)
Gas rates from 0 to 1367 mscfd (38.6 e³m³/d), with more gas throughput possible at higher suction pressures

Completely field serviceable, the [MPTP](#) has a similar footprint to the [HCG50](#), more throughput with less peak power and service cost than the HCGs now in this service!

Another First! Installation of 2 - HCG50's in Parallel

In June CCI installed two [HCG50's](#), affectionately known as the 'Twins', in parallel on a group of nine Cardium light oil wells. The parallel installation was necessary to process the high amount of gas associated with the light oil. This application is a great example of the liquids processing capability of our HCG compressors. After the Twins were installed, oil production increased by 100% and gas production increased by 250%.

Producing formation: Cardium

- Header pressure reduction: 170 psi
- Condensate rate increase: 100%
- Gas rate increase: 250%

The Twins will have paid for themselves in less than 3 months with the increase in production even at current oil & gas prices!

For even greater liquids processing capability and better serviceability, the [Multiphase Pump \(MPTP\)](#) was developed. It is the new go-to system for any multiphase pressure boosting applications at headers or at satellites.

SUMMER ACTIVITIES

Despite turbulent global economies, we have maintained regular domestic operations and are looking forward to resuming our international activities. Over the last few months, we have expanded our national foothold with over **780 compressors** in operation, and now stretch across Western Canada from BC to MB. We are streamlining our processes and reorganizing for more efficient productivity with the launch of our newer product lines. It's amazing how many parts and inventory can accumulate over nearly 20 years!

Another customer's 8 units loaded and ready for delivery!

Twin [HCG15](#) trailers on their way to a customer's site.

OPERATIONS

Gerry Plett, Former Operations Manager

It is with heavy hearts, we announce the untimely passing of Gerry Plett, Operations Manager of CCI for over 17 years. After a brief and courageous 6 month battle with ALS, Gerry laid to rest surrounded by his family at home. He will be dearly missed by all those who had the pleasure of knowing him.
